

EXECUTIVE SPONSORSHIP PROPOSAL · 3 TIERS · 9 SESSIONS

Make Copilot the way we lead.

Copilot does the catch-up. Your leaders make the calls.

1 Why now

2 The program

3 The ask

[Your Name]

[Title], [Organization] · A short, tiered proposal, then your decision

Based on the Copilot Premium Executive Playbook

THE BOTTOM LINE, UP FRONT

The ask, up front

I want to run a short, tiered Copilot program for our leaders, and I need your **sponsorship** to do it right.

Sponsor it, and go first

Leadership models it before we ask anyone else to.

Name an owner

One small team that carries adoption after the training.

Back a 90-day rollout

Time on calendars, not just licenses in a portal.

Reinforce the habit

Ask your teams what they automated this week.

>_ A decision today, not a pilot that quietly stalls in week six.

We bought the licenses. Are we running on them?

Most of a leader's day goes to keeping up. Our inboxes, meetings, and documents already hold more than anyone can read. Copilot Premium does the reading, drafting, and prep so our time goes to judgment. But a license no one is trained on is a cost, not a capability.

Can't find it

The top reason new users stall is they never locate it.

Habit or bust

Adoption dies without a habit, and a habit needs sponsorship.

Grounded in us

Premium works from our actual work, not the public web.

*There is a real difference between a company that **bought Copilot** and one that **runs on it**.*

Leaders go first, the organization follows

When our leaders visibly use Copilot and get their own time back, everyone else follows. And Premium is not the free chatbot your teams have tried. Here is what makes it different.

It knows your work

Ask about a thread, a customer, or a document by name. It reads across our Microsoft 365 content.

It works where you work

Built into Outlook, Word, Excel, PowerPoint, and Teams, with one Copilot Chat front door.

It sounds like you

Set it up once and it drafts in your voice, so less of what it produces needs a rewrite.

It stays private

Your prompts and data stay inside our tenant under enterprise protection. More on that next.

THE PROPOSAL

What we're proposing: a tiered program

Three tiers, each builds on the last. Nine short sessions, every one 30 or 60 minutes, each useful on its own. Run one a week, or block a half-day per tier. We start at the foundations and add leverage from there.

3

tiers

9

sessions

30-60

minutes each

~6 hrs

total time

TIER 1

Foundations

Find it, trust it, make it yours, and put it to work.

TIER 2

Deeper Value

The premium reasoning agents that do the heavy thinking.

TIER 3

Build Your Own

Give Copilot a standing job as an agent that comes to you.

The whole program on one page

TIER 1

Foundations

Four sessions · about 3.5 hours

- **1.1** Meet Copilot, find it, make it yours
- **1.2** Prompt like you mean it: first win
- **1.3** By app: where the time comes back
- **1.4** Put it on a schedule: morning brief

TIER 2

Deeper Value

One core session · one optional

- **2.1** Reasoning agents: Researcher + Analyst
- **2.2** Copilot Notebooks (optional)

TIER 3

Build Your Own

Two core sessions · one optional

- **3.1** Build your Chief of Staff agent
- **3.2** More agents worth building
- **3.3** For your assistant: daily prep (optional)

THE FIRST QUESTION IN THE ROOM

Is our data safe? Yes.

Copilot works on our real work, not the open internet, and that work never leaves our tenant.

Stays in our tenant

The same enterprise encryption and access controls as the rest of our data.

Not used to train models

Our prompts, documents, and Copilot's responses are never used to train the models.

Only sees what you can see

Copilot respects existing permissions. It cannot surface a file you can't.

Controls and an audit trail

Purview gives IT visibility, DLP policies, and audit logs across Copilot.

>_ Clean permissions are the prerequisite. Copilot only surfaces what a person can already see.

DELIVERY OPTIONS

Three ways to run it. You decide who carries it.

1

Microsoft-led

Microsoft facilitates the full program with our leaders, session by session. We bring the room, they run it.

Best when: Expert-led delivery and the fastest path.

2

We start, you scale

Microsoft runs the foundation live, trains our trainers, and hands us the deck and framework. We build out the rest.

Best when: Building the capability in-house.

3

Partner-led

A Microsoft partner delivers and customizes the full program alongside us. A dedicated team owns rollout and adoption.

Best when: A committed team to own it long term.

Same framework, three speeds. You own it either way.

MAKING IT STICK

A training is a spark. This keeps the fire lit.

Most of what people learn in a session is gone in a day without reinforcement. Five moves turn a good training into an adoption engine, and one small team owns them all.

Champions

A trusted peer in each department. Not IT, not Microsoft.

Governance

Guardrails with Purview before we go wide.

Measure it

Four numbers in a monthly leadership review.

Scenario library

Pick two high-value wins per team and prove them.

Community of practice

A Teams community and a prompt of the week.

Center of Excellence

One small cross-functional team that owns all five.

*Give adoption a team and a name, **or watch it quietly stall in week six.***

PROVING THE RETURN

How we'll know it's working

Four numbers in a monthly leadership review, pulled from tools we already own.

Active

users

Returning

users

Assisted

hours

Satisfaction

score

Where these come from: the Microsoft 365 Copilot Dashboard in Viva Insights, plus the Microsoft 365 admin usage reports.

11 × 11

11 min a day · 11 weeks of use

The tipping point: it takes about that much steady use before the productivity signal is clear. So give it runway, and don't grade ROI in the first 30 days.

>_ *Watch the returning users, not the sign-ups. The habit is the ROI.*

THE PLAN

The first 90 days

A simple path from sponsorship to a habit our leaders feel, and numbers we can review.

Fifteen minutes a day beats a training marathon. *This starts in two weeks, not next quarter.*

THE DECISION

What I need from you today

1

Approve and sponsor the program

Say yes, and commit to going first as a leadership team.

2

Name the owner and the CoE team

One small cross-functional team that owns adoption.

3

Green-light the 90-day rollout

Time on calendars and the first working session booked.

4

Reinforce the habit

Model it yourselves, and ask your teams what they automated.

>_ Say yes to the program, go first, and name who owns it. I'll bring the plan and the room.

THE BOTTOM LINE

Let's be the company that runs on **Copilot**, not just the one that bought it.

Leadership goes first. The organization follows.

Next step: book the 45-minute working session. We set up personalization, build a chief-of-staff agent, and get each leader a real win on their own work.
